

Senator Pontoon Range for serious safety

The spacious cockpit and wide top pontoon design are key features, along with the solid construction and stability ensuring a soft ride. The extra buoyancy high in the pontoon sides combined with the multi-chambered construction provides the ultimate in safety. You will be surprised at the features that Senator call standard, the quality of workmanship and the value that your Senator boat provides

The IS400 has a high level of stability, load-carrying, reserve buoyancy and can be towed on a trailer easily by any family car, which makes these very useful, all-rounder crafts.

Can come in centre console configuration

The design of a Senator is leading edge. The unique hull shape allows each boat to cut through the water providing the 'smooth ride' characteristic of the Senator range. The smooth ride means a more pleasant journey for everyone on board.

Senator has developed a series of innovative design features to meet the needs of boaties throughout New Zealand. Senator was one of the first boat manufacturers in New Zealand to pioneer the unique folded style alloy pontoon.

The pontoon is generally well known for safety. However, the Senator pontoon takes safety a step further by taking flotation high into the sides of each craft, making them virtually unsinkable.

Not only is a Senator a practical boat, its innovative design makes it a good looking boat too.

Senator also prides itself in providing boats with many features incorporated in the 'standard' boat, such as hand rails, bollards, cleats and boarding ladders. Senator also firmly believes everyone buys a boat for a completely different reason. It may be for fishing, diving, family fun and adventures, or for business. Whatever the reason they can customise a boat to your needs.
